1. Reports of display dimming

Yahoo group: Yaesu_FT60R
Date: 2005-01-18 21:06:22 UTC
From: David Bamford
Topic: 1 Message: 1

Hello all: I am a new poster and a new Ham. I am
considering the purchase of a FT-60r, but have seen
some reports on eham.com that the display is dimming
with low temps.

Anyone seen this with their units?

Any other comments would be welcome.

David

David,
In Wisconsin I am using the FT60R with out problems. In cold weather
the radio does work. I have not had a problem with my display but it
is LCD and temp will effect LCDs in my opinion no matter what.

3. Mod reseting the FT60R

Yahoo group: Yaesu_FT60R
Date: 2005-02-04 23:10:41 UTC
From: alert3ff@alert-net.com
Topic: 3 Message: 3

Greetings,
I had my FT60R lock up when choosing scan banks. Someone in the group mentioned that if you do the MARS/CAP mod it will force the cpu to reset. Well I did do the mod and it did make it reset. Now my FT60R is working again. Thank you to the ham that offered the advice. Just a thought, if it locks up again I wonder if jumping where the resistor was will make it reset again?
Ed

I've had my FT60r for about 7 months and love it, as most hams will
tell you the stock "ducky" will only get you so far. I bought the
Comet SMA 24 HT Antenna and am very happy with the reception.

here are the eham reviews: http://www.eham.net/reviews/detail/1839

Good luck with your new HT*

10. Bank scan problem

Yahoo group: Yaesu_FT60R
Date: 2005-08-24 13:10:33 UTC
From: Dan McKenzie
Topic: 10 Message: 10

Just received my new FT-60R. Great radio so far,
but I do see the wierd shut off thing going on
while scanning banks.

In mine, I have some 155 mhz freqs entered in memories 501-503
and these channels assigned to bank 5. When I select
bank 5 (hold "band" down and rotate tuning knob to
that bank, then hit "v/m"), I get the correct band.
When I rotete the tuning knob, I get only the memories
in that group, as it should be. But, if I then
try to scan that group by hitting the up or down
arrow, it powers down. Tried it with another bank
with the same memories entered in it, same result.
Interestingly enough, my bank 1 has some amateur freqs
entered, 146 and 440 mhz stuff. It does not do the
power off thing, works fine.

I can do the "bank link scan" on these banks with
no problems.

I e-mailed Yaesu and Burghardt (where I bought it)
to see if they have any ideas.

Dan, W9FCC

11. Re: Bank scan problem

Yahoo group: Yaesu_FT60R
Date: 2005-08-25 02:18:03 UTC
From: Dan McKenzie
Topic: 10 Message: 11

Been messing around, trying to find a clue or
pattern to this problem. When I select a bank,
I can get scan to work properly if I select
one of the memories in the bank in the middle.
In other words, not the first or last memory
in that bank, somewhere in the middle. Then if
I hit the up arrow it scans correctly. Yet,
bank 1 always works no matter what I do.

Hmmmm...curiouser and curiouser.....

Dan, W9FCC

13. Sent mine in - Scan/power off problem

Yahoo group: Yaesu_FT60R
Date: 2005-10-13 18:15:31 UTC
From: Dan McKenzie
Topic: 13 Message: 13

Well, I finally bit the bullet and sent my FT-60
in to have the firmware bug fixed. This is the
bug everyone has reported where the rig turns
itself off instead of scanning under certain
circumstances. Shipped it Thursday, arrived at
Yaesu in California Monday, received a courtesy
card from Yaesu the following Monday confirming
the turn-around time of about 2 weeks.

Time will tell.

Dan, W9FCC

14. Re: Sent mine in - Scan/power off problem

From: Dan McKenzie
Topic: 13 Message: 14

Yikes! Got home today and the radio is back!
Pretty good turn around time, about a week.
And, everything appears to work fine now.
They even retained the memories I had in it.

Dan, W9FCC

16. New Member/Question About FT60

Yahoo group: Yaesu_FT60R
Date: 2005-12-13 01:42:33 UTC
From: vectorczar
Topic: 16 Message: 16

Greetings to the list from a new member. I'm studying to get my license, and have my eye on the FT60. It has alot to like about it, but I really like the extended receive feature and large memory capacity.

Question- what kind of scan rate does it have? I won't be maxing out all the memories, but I intend to use this radio while railfanning and going to airshows, and would probably be monitoring anywhere from as few as 4 freqs upwards to 20 or so.

Another question- since you've all had the radio for at least a little while, how do you like it? Any regrets?

Any information is very much appreciated.

Thanks,

Czar

17. Re: [Yaesu_FT60R] New Member/Question About FT60

Yahoo group: Yaesu_FT60R
Date: 2006-01-03 03:19:13 UTC
From: David Bamford
Topic: 16 Message: 17

I have no regrets at all. It scans pretty quickly,
especially if you put known frequencies in memory.

I have had it over a year and wouldn't trade it for
any other.
Get the AA battery pack for backup.

Good luck,

David

18. FT-60 Intermod

Yahoo group: Yaesu_FT60R
Date: 2006-01-03 09:02:30 UTC
From: W1EOF
Topic: 18 Message: 18

Hi All -

I have had my FT-60 for about two months now and I really love it. I especially like the ease of use and the large display. My only complaint is that it does not like to be around any personal computer. I understand this is a common problem with all of the wideband-receive radios.

I'm wondering if anyone on the list has attempted to build a bandpass filter for 2M to eliminate this problem. Or maybe there is one available commercially? For sitting on my desk I would glad to give up 440 if the trade-off would be the ability to listen to 2M.

Thoughts?

73,

Mark W1EOF

19. FREQUENCY EXPANSION....

Yahoo group: Yaesu_FT60R
Date: 2006-01-09 00:55:44 UTC
From: mikemetrobuff742
Topic: 19 Message: 19

NOTE!!!!if anyone is interested please email me so i can send you the pictures which specificly show exactly what to do and what resistor to take out,thanks,mike.

Mod will give TX 137-174Mhz and 420-470Mhz and is verified for US spec radios only.
Mod involves removal of an extremely small surface mount resistor.
Do not attempt if your skills are not up to it. Irreparable damage could occur to the radio.
Mod does not make radio compliant for CAP use; it may also void your warranty.
This mod is provided for reference only.
Performing this mod will erase all memories and re-set the radio.
Perform at your own risk!!!!!!!

Instructions

Remove belt-clip and battery

Remove the 4 screws (2 silver and 2 black) in the battery compartment.

Remove antenna and pull off the knobs

With tweezers or needle nose pliers, carefully remove the rubber gaskets around the knob shafts.

Unscrew the two split nuts from the knob shafts

Take out the rubber plug for the mic and DC sockets and swivel it around 90 degrees.

Carefully remove the body of the radio from the front panel. Ease it out from the bottom first making sure you don't damage the rubber waterproof seal that goes all around it. Separate the LCD section from the front section.
Remove R1164. This is found on the right side of the radio, on the board just above the keypad area.

Reassembly is the reverse of the disassembly.

24. Keypad Issue

Yahoo group: Yaesu_FT60R
Date: 2006-02-13 01:28:51 UTC
From: Mark Robinson
Topic: 24 Message: 24

Has anyone else had an issue with the "ink" wearing off the keypad? I purchased a new FT60R just 4 months ago, works great, however the most common keys (bottom row, right column) have almost all of the ink worn off. I'm using it rather light duty, just a few times per week, and mostly scans so I'm a little perplexed that this would happen. I've had other HT's and have never seen such a thing before.
I guess it's going back to Yaesu.
Thanks for any info.

This campaign is about Human beings, Democracy, UNHCR, Refugees, The Iraqis, Islam, Kurds, Human rights, Respect, Money, Donations, Angelina Jolie, Pavarotti, Giorgio Armani, Donors, Peace, History, Campaigns and about you if you care about these words.

Hi there,

I am SAM, an Iraqi refugee living in Lebanon at the moment; I have spent the last 10 years of my life as a refugee registered with the UNHCR in Beirut. The last 4 years, I have spent as an activist for peace and human rights (especially refugees and asylum seekers) on the Internet; I'm also books author and ebooks publisher. I have launched many campaigns to improve our situation as refugees in Lebanon and hopefully bring more understanding to our problems worldwide. I helped make many changes and improvements at the UNHCR office in Beirut; I used the Internet as the field for my activities (you can read more about that in my free ebook 'MY CAMPAIGNS'). All my ebooks are free and could be download from my sites.

This is my newest campaign, it's about the illegal and humiliating actions of the UNHCR, who using photos of refugees as banners and human-buttons to collect money. This is an abuse of the dignity and humanity of the refugees and must stop immediately and a clear public apology present by The United Nations High Commissioner for Refugees. My friends, I am talking about the pictures you can see here:
http://unhcrlebanon.blowsearch.ws/human-buttons.htm

Also you can read my new campaign 'Urgent, we need smile' here:
http://home.graffiti.net/lebanon1/email_me.htm

For more info about UNHCR and life of refugees you can read my free ebooks. I invite you as fellow humans and members of the world community to support my campaign by reading my article on my site and see the human-buttons. The campaign is to support and improve the UNHCR http://www.unhcr.org especially after the last scandals in the UN and UNHCR, just for example: http://www.mizzima.com/archives/news-in-2005/news-in-april/12-April05-22.htm

"We make demonstration and fast because the UNHCR office in Cairo did nothing for our problem..." http://news.bbc.co.uk/2/hi/africa/4440730.stm

Together we will build better world.

You could reach me fast via this form: http://lebanon.galaxy99.net/email_me.htm
and if you like to know more about me, you can google for my name 'osam altaee'.

Thanks

Topic: 40 Message: 40

Hi...My rig is a whopping 2 weeks old.

So far...I love it. I use it in the car to help me pass the time during my 63 mile commute to and from work.

I use a mag mount on the car....and the factory supplied rubber duck antenna from home.

Have no clue yet how to do anything with it yet except dial-up a 2m repeater and QSO...

Will help out here on the boards wherever I can...

I have noted that when my battery is charged, it shows about 8.8v

When it runs down to around 6.0 it stops hitting repeaters...yet...the battery icon does not show on my screen, let alone showing "low battery"....

When does that ICON for low battery appear?

Thanks

From: seattlesigs73
Topic: 43 Message: 43

Has anyone else experienced this?

I plug my mike in...and...it unplugs itself !!

Sometimes, right in the middle of a QSO...kicking me off the repeater.

I know that Yaesu supplies a ring for you to use on the rubber duck antenna so you can clip the mike cord to it, which secures the mike.

However...when using an external antenna mobile...the ring does not work on the small coax...and the mike unplugs!

I e-mailed Yaesu 2 weeks ago with no response!

Does anyone have a FAX number for Yaesu ????

Suggestion.....

This is what I do with external antenna & mike.

"Lock" the dial via menu settings (Menu 25, Select "LKDIAL"; then Lock via F/W+6) and put the ring clip over the dial knob to secure the mike.

You can still make most of the adjustments that you would have used the Dial knob for by using the up/down arrow keys.

From: arbalete_w
Topic: 46 Message: 46

Hi,

I posted this earlier in another group but noticed there's been a dearth of activity there so I'm not sure if it is still active. I hope I get better chances here...

I just started to put my FT60r ht through it's paces and noticed the radio shuts off when bank scanning. It happens randomly and not often. I understand this is a firmware issue? What kind of repair is needed? The guy from the dealer who sold me this says he hasn't heard of it.

Also has anyone tried using their computer to control the ht? I just ordered the interface from ttl2usb and wonder if anyone here is experienced in this.

Thanks.

Walter

~~~~~~
Hi Walter,

I have had my FT-60R for just a little while and have not had the chance to really "put it through it's paces". Does the problem only occur when you have it hooked to the computer, or stand-alone as well?

I'm not familiar with the ttl2usb interface. I'm about to go out and buy the std interfce/software so I'm very curious about this. Is it a cable from a different source? Is there an advantage v the Yaseu package?

Sorry I could not be helpful to you.

73,

Mark W1EOF

OK...

Some repeaters require a tone to allow you access. They announce a PL number.

Where in the manual does it tell you how to set PL numbers? Page number please?

Thanks

KENN / WD8ILB

50. RE: [Yaesu_FT60R] Getting Into Repeaters

See page 22 of the Manual "CTCSS" operation.

"PL" stands for "Private Lines" which is a Motorola trademark name for their implementation of CTCSS (Continuous Tone Code Squelch System).

CTCSS is often referenced as "PL" or "Tone" in repeater listings.

From: Bob Berg
Topic: 51 Message: 52

Don't mess with changing the offset. Just put in the independent transmit & receive frequencies of the repeater.

From Page 28 of the manual:

Storing Independent Transmit Frequencies (?Odd Splits?)

All memories can store an independent transmit frequency, for operation on repeaters with
non-standard shift. To do this:
1. Store the receive frequency using the method already described under MEMORY
STORAGE (it doesn't matter if a repeater offset is active).
2. Turn to the desired transmit frequency, then press and hold in the [F/W] key for one
second.
3. Within five seconds of releasing the [F/W] key, rotate the DIAL knob to select the
same memory channel number as used in step ?1? above.
4. Press and hold in the PTT switch, then press the [F/W] key once more momentarily
while holding the PTT switch in (this does not key the transmitter).

NOTE: It is easier to do this if you have programming software.

Yes!! This is one of the few annoyances I have found about the FT-60.
I solved it simply by pulling out the rubber cap for the power and
mic inputs. You'll see that the cap rotates from the center, don't
yank it but pull it gently and it will come out. I don't plan on
replacing the cap until I sell my 60.

From: Johnne Ables
Topic: 55 Message: 55

Hi All,

Antenna: Arrow J Pole on a fiberglass mast up about 25', but not completely clear - no huge pieces of metal or metal buildings nearby, though.

Receive - I hear backyard repeaters that are 60 miles away.

Transmit - Nothing, nada... There is a dual band repeater 5 miles from my QTH that is up about 100' and they don't hear me on their morning net.

Any feedback? Is it possible that the transmitter is dead? When I make a call the PO meter pegs full right on the display.

Thanks!

J

Hello there is test you can try out on this.

1. Try and see if your even transmitting,do this with another radio. See if the other radio can hear your signal on 146.550 mhz if you can hear your signal and your voice then no problem.

If its not check the manual and see if your radio's transmit is locked out.

2. Try and change the transmit to higher power and see if you can hit the repeater. Or change to another location.

I had similar problem with my VX5R and found out some places were just dead when it came to access of the repeaters. And when I was up on a 4 story building it was really weird.

I will check mine and let you know but do try the other parts if you have a spare transceiver. It might be working fine but just too far away from the repeaters. I have similar at times with the Mt.Palomar repeater as some places Its too weak to transmit and if I go to higher power it hears me.

Good luck and 73's be on Guam in a few days and will be on local echo link.

OK...let me see a show of hands....

How many people think their battery discharges way too fast?

How long can you go on a charge with "normal" use?

It seems that I am constantly in the middle of a QSO and "poof!"...

That little "low battery" indicator only comes up seconds before there isn't enough juice left to tell someone you have to sign off because your battery has conked.

Has anyone figured out a way to run the rig from a cig lighter? I have the charger for the lighter, but, of course, they tell you that you can't operate the rig using it...not even for receive...

Sigh

Hi Bob:

I thought I was told by the store where I got my HT that the lighter plug is strictly for charging and it can't be used to power the radio during transmitting or receiving...I haven't even opened the lighter plug charger yet.

I will have to read the package again....

Hi Kenn:

I may need to clarify an issue.

I am not aware if the Yaesu E-DC-5B "DC Cable with Cigarette-Lighter Adapter" has any voltage/current regulation in it that may prevent it from powering the HT while in use.

I know that the NC-88B Overnight Battery Charger that is supplied with the radio will not let it operate. This fact is mentioned in the radio's owner's manual, but there is no mention in the manual of any restrictions on using the E-DC-5B.

I already had an short cable with a cigarette lighter plug on one end and a set of Powerpole connectors on the other. When I bought my FT-60, I simply purchased the E-DC-6 DC cable and put a set of Powerpole connectors on the DC cable and I was able to use with a cigarette lighter outlet. Using this configuration, I was able to both charge and use the HT at the same time.

I hope that the Yaesu cigarette lighter adapter allows you to power the radio for use. It sure helps when you are in your vehicle and your HT battery dies.

Hi Bob:

The box says" The E-DC-5B allows power to be supplied from the cigarette lighter socket of an automobile."

It is 13.8v DC input....has a 3A fuse in it, and has a built in noise filter

I e-mailed this around to other hams and they seemed to think it actually is a power cord that will work...and not a "mobile charger" which is what I thought it was....

We will see in about 40 minutes when I leave work and plug the sucker in!

Kenn

70. FT-60 Audio connector

Yahoo group: Yaesu_FT60R

From: W1EOF
Topic: 70 Message: 70

Does anyone have a low-cost source for the 4-conductor plug for the external audio in/out? I was going to buy the Yaseu splitter cable then thought "Why should I do that... I can just make up my own adapter cables for different setups (headphone/mic, TNC, etc). Some places these plugs are like $7.95 plus S&H. I found one place that has them for $3.95 + S&H. I'm hoping to find some at Boxboro Convention this weekend.

Hi Kenn,

1. I'm *VERY* happy with battery life on my FT-60R. It came with the FNB-83 battery pack. I've been amazed at how long the charge lasts. I also purchased a smaller FNB-64 pack on eBay (it was brand-new and cheap... I think $7. That does not last as long which is expected.

2. I'm very interested to learn about using an external 12v source. Is that 12 connector documented in the manual? What's inside the Yaseu cable, just a fuse? What's the value?

73,

Mark W1EOF

Bob:

Last night I decided to try the lighter plug. When I turned the rig on, "12V" came up on the screen...and I was able to communicate fine. I am told this will NOT charge the battery...but that it will power the rig.

I didn't use it for any long QSO...just a short one...maybe 10 minutes.

I will keep experimenting.

Hi Kenn:

The cigarette lighter adapter should also charge the battery.

I base this on a statement from the top of Page 9 of the FT-60
Operating Manual:

"If only 12 ~ 16 Volt DC power is available, the optional E-DC-5B DC
Adapter (with its cigarette lighter plug) may also be used for charging
the battery."

Looks like your problem is solved.

Enjoy your radio.

My radio when I used the adapter for the cigarette lighter let it transmit fine and had no problem. The 12 volts I believe on the FT530 let it transmit at higher power. The FT 530 got warm the longer I used it.

I was told the same thing when I bough mine from HRO in San Diego that the wall wart charger won't let it transmit and I tried it as an experiement. It shut down twice.

I noticed the same auto unit wont work on my VX5R. It won't even power it. I also noticed that on some auto's when you turn off the car the battery disconnects the lighter and this caused a problem on one of my scanners.

The FT-60R will power just fine from the 12 volt adapter and will charge the FNB-83 battery pack as well, though not some of the after market packs unless a slight mod is done to the pack.

You can overcharge the FNB-83 pack if it is left connected to the 12 volt adapter too long. It also get uncomfortably warm to hold in your lap as the battery pack heats up. That's not a problem with an unmodified aftermarket pack. I run my FT-60 as my mobile in my XYL's car with the adapter and an aftermarket pack to avoid overcharging and heat problems.

Be careful about leaving the adapter connected to the FT-60 and unplugged from a power source. On mine at least, it results in loss of memory pretty quickly. Found that out when I discovered that my wife's Ford, unlike my GMC truck, powers the cigarette lighter plug down when the ignition is turned off.

I recall a rented car once where I got out to buy a few things and came back the scanner I had stopped working when the car turnned off and when I restarted it it caused a surge where I could only use the batteries. Not sure why that was but might have been a freek spike in the system.

Hi Kenn:

I may need to clarify an issue.

I am not aware if the Yaesu E-DC-5B "DC Cable with Cigarette-Lighter Adapter" has any voltage/current regulation in it that may prevent it from powering the HT while in use.

I know that the NC-88B Overnight Battery Charger that is supplied with the radio will not let it operate. This fact is mentioned in the radio's owner's manual, but there is no mention in the manual of any restrictions on using the E-DC-5B.

I already had an short cable with a cigarette lighter plug on one end and a set of Powerpole connectors on the other. When I bought my FT-60, I simply purchased the E-DC-6 DC cable and put a set of Powerpole connectors on the DC cable and I was able to use with a cigarette lighter outlet. Using this configuration, I was able to both charge and use the HT at the same time.

I hope that the Yaesu cigarette lighter adapter allows you to power the radio for use. It sure helps when you are in your vehicle and your HT battery dies.

I have used the same unit on my old FT530 and it worked great on the charging side. It should work also on the FT-60 R. I have enjoyed mine pretty and noticed the charge lasts along time as I havent used the radio in 3 weeks. I am at sea and dont get much range on vhf out here.

I'll ask again:

1. Is there anything other than a fuse in the Yaseu DC cable?

2. If there is a fuse, what is it's value

And for something new:

Some of the cellphone chargers I have had come with specific warning about starting the car with the charger attached. They say the chargers can be damaged by a surge or spike. I'm wondering if it would not be worth it to include some regulation such that the voltage could not exceed say 12vdc?

Interested in hooking up your FT-60 to a TNC? A different
set of headphones/mic? Noticed how expensive these 4-conductor
plugs are at most places?

Well thanks to tip from Glen Reid K5FX:

Straight 3.5MM 4 COND PLUG by Kobicon.
171-7435-EX
Right-Angle 3.5MM 4 COND PLUG by Kobicon.
171-6435-EX
Both available at Mouser for < $2 each.

Let me know if you are interested in these as I'm thinking
about buying a few of them. No sense in all of us paying
the higher S&H. Email me direct (NOT on list) please.

It appears that the lighter plug does, indeed, charge the unit. However...usually when I put the rig on the AC Charger overnight...the most the meter shows when I unplug it is around 8.4v.

Yesterday I had the rig plugged in for an hour as I drove (in the lighter) and the meter went even higher, making me think I could do damage to the battery or even the radio by using it for any longer period on the 12v line.

Kenn,

My suggestion would be: If you want to use the FT-60 in the car then get yourself a small amplifier and a no-hold setup. The amp can be a 25W job, nothing expensive. That will get you up to a good mobile power level. I'm sure you will find the extra power rewarding in more consistent conversations. You then can dial the FT-60 back to a lower power setting putting less strain on it. Yes, it's made to run full power all day long. Modern electronics are made to run hot. I'm old school and would prefer mine to run cooler and believe that it will help to give the FT-60 a longer life.

The fact you're feeling the heat tells me you're holding it in your hand. It would be safer and more comfortable to get some kind of hands-free kit. I buddy just bought one at MFJ that is like the ones used for a cellphone. Single earbud and an inline microphone on the cord. He said it works great and was not as expensive nor as uncomfortable as the full headset. You also can find a bracket/holder thingy made for holding your cellphone to the dash. That way you can don't have to go fishin for the radio to change repeaters, etc.

That's my $.02

73,

Mark W1EOF

90. Re: [Yaesu_FT60R] Heat

Yahoo group: Yaesu_FT60R
Date: 2006-09-10 18:11:30 UTC
From: Phil Edwards
Topic: 87 Message: 90

Modern HT's are so small and high powered that heat dissipation becomes an issue.

The FT60 has been designed to put out 5W of power when operated at a voltage from 7.2V upto 16V (it will actually work down to 6V but I don't think the full 5W is available at this low voltage). This wide voltage range would suggest there may be some form of voltage regulation within the set which in turn would generate heat (1.3W / V on VHF and 1.5W / V on UHF). In addition to this, amplifier circuits are not 100% efficient and will therefore generate further heat. The practical maximum efficiency for a class C amplifier stage is 90% and even if this were achievable in a radio such as the FT60, then you would need to put in just over 5.5W of DC in order to get 5W of RF out. If efficiency were only 80%, then you would need 6.25W of DC for 5W of RF. This extra power has to go somewhere and unfortunately this leads to further heat generation.

In the bad old days, when we had larger sets with metal cases, heat dissipation was often barely noticeable as it would quickly dissipate through the case. Nowadays, however, you are more likely to find a small heatsink inside the radio, close to the outer case which, being plastic and therefore a poor conductor of heat, will generate hot spots on the case itself. Whilst this can be worrying the first time you encounter it, this high temperature shouldn't do any damage to the set as modern components are designed to operate at very high temperatures.

As for the SWR issue, I wouldn't be too concerned. An SWR of 1.5:1 equates to only 4% reflected power and some of this will be lost on the co-ax anyway. Most modern sets contain circuitry to roll-back the power output once the SWR hits about 3:1, which equates to a whopping 25% reflected power, so 4% should be well within spec, even for a radio such as the FT60.

Regards
Phil (G8YQK)

Subject: [Yaesu_FT60R] Menu Mode 5

Can anyone tell me the steps to checking to see if the
BUSY CHANNEL LOCKOUT is on or off?

I am not familiar with any of the programming modes and am nervous
that I will get into something I can't get out of...

I have to make sure it is turned off...

Thanks

Kenn/WD8ILB

94. PLs

From: seattlesigs73
Topic: 94 Message: 94

What's the deal?
I took my rig out of the box, charged up the battery, put the antenna on...and scanned for repeaters. I can transmit on just about anything I can hear locally.
I have never set anything on my radio..no PLs...haven't programmed any channels...nothing...right out of the box.
Other hams say it's impossible. You can't get into repeaters without programming PLs.

Anyone care to comment?

Kenn/WD8ILB

Most repeaters have Pl's in them like the SANDRA's out in San Diego, and the only way you can trigger one is to put the pl's in the radio. Only one or 2 have no pl's and are usually quite strong to hit anywhere in the Bay area.

I use mine here on Guam and its pretty good unit,it connects to 2 repeaters here that are linked,Saipan is the other. Good luck.

As many of you know, I am running my FT60R from my car, with a lighter plug..and a 1/4 wave mag mount on the roof.

While qso's on 2m depend more on the repeater than anything else, the folks I am talking to are telling me I'd be even better off with a small amp and a 5/8 wave antenna...or...just the 5/8 wave antenna.

Anyone have any suggestions or recommendations on either or both of these?

Thanks

Usually this is correct as the more power you run on a HT the better the signal to the repeaters. I agree with these guys on all the above as a short duckie antenna is a 1/4 wave and is like using a dummy load antenna. For myself I use a mobile rig with 40 watts and it gets into the repeaters better. At the moment I am on Guam island and there a low spots here. I cant hit the repeaters in certain areas even on 50 watts.

98. Entering PLs Into The FT60R

Yahoo group: Yaesu_FT60R
Date: 2006-10-16 00:58:56 UTC
From: seattlesigs73
Topic: 98 Message: 98

Ok. I have had my rig now for 5 months, and have yet to put them in, and also have yet to put any repeaters in memory....

WHY? You may ask?

Because it "freqs" me out to think I might push a button that will freeze me up or freeze me out...and make the rig useless.

Since Yaesu never answered any of my e-mails, I am also concerned about customer service if I DO mess it up.

Tell me it's a lot easier to put the PLs in than the book seems to make it...it seems intimidating to me....

The Pl's are alot easier than it looks and if you make a mistake like putting in the wrong one you can always change it. It took me a few days to figure mine out as I had 2 other HT's before this one and they were all Yaesu's. The VX5R and FT530. There somewhat similar and there easy to program.

Good luck and have fun on it,been using mine here and there like Guam,Manila and a few other spots.

100. Problems Using Antennas With SMA Connectors

Yahoo group: Yaesu_FT60R
Date: 2007-02-11 03:14:15 UTC
From: seattlesigs73
Topic: 100 Message: 100

Has anyone had a problem with antennas that have an SMA connector?

I have had my mobile antenna's SMA connector literally fall off the coax TWICE so far. The maker of the antenna replaced it the first time, and they are replacing it a second time as we speak!

Just wondering if anyone else is experiencing this problem?

WD8ILB / Ken

102. Channel Selector / Squelch Knob

Yahoo group: Yaesu_FT60R
Date: 2007-04-25 11:55:38 UTC
From: seattlesigs73
Topic: 102 Message: 102

I see it's been very quiet in here, which means no complaints about the FT60R !!!!!

I have a question. When I change my channels manually, my squelch knob turns with the channel knob.

I can pull up slightly on the channel knob, and the squelch dial doesn't turn as much. If I pull up any more on the channel knob, it comes off...

Any way to make it work right? I can deal with it...have since I got the radio 13 months ago.

Just wondering...

CanadianDiver <canadiandiver@...> wrote:
Do you see a gap between the knob and the ring? Mine has.

If there's none, likely the channel knob is sitting too low or the squelch ring is sitting too high. You might want to put a small piece of rubber inside the knob where the stem enters to let it sit higher.

If there's a gap, check the bottom of the former or the top part of the latter. Maybe something is sticking out that causes them to snag. If it's minor, you can probably file it off or use a fine sandpaper.

From: Jim, WD9FRF
Topic: 109 Message: 115

Well, Kenn, beats me. Unless someone else out there has run into this and has a solution you might need to reset the rig.

I have accidentally turned the feature on from time to time and toggling the button has always turned it off again. Have to admit though, the first time it took me a bit of digging in the manual to figure out what I had done.

Let us know what your ultimate solution is.

If Simplex is working than your finals must be intact (sorry, you'll have to make your own toast!) Other than getting insight here on line, the best bet is to either call Yaesu or, as you said, wipe the memory and do a reset.

Hope you don't have to get that drastic!

WD8ILB / OHIO

CanadianDiver <canadiandiver@...> wrote:
Yup the are. I have had this for 2 years and was working well till the other day. I did take the battery off for over 24 hours so I'm not sure if that has anything to do with it. I plan to reset the whole thing but not sure if it will make a difference apart from erasing the memories and other settings. No, the internet icon isn't up either.

Hey folks! I was asked on the air this morning by a blind user of an FT60R how to turn OFF the "internet connect" beep. She managed to turn it on, but has no idea how she did it, and the tone before she transmits is driving her..and those she talks to...crazy!

Can someone tell me what to tell her to do?

Thanks

Very simple problem to correct - Looking at the bottom row of buttons, the one in the center(It has the word 'Set" above it), just press it and the icon on the upper right of the screen should disappear. This means the internet "beep" is shut off.

Hope this helps.

Ok I'll do my best to try. Tell her to feel the bottom row of the buttons on the keypad, and move her finger to the second button from the left, press that button for approx 1/2 second. That will deactivate the Wires DTMF tone.

Today I was driving home from work, and through the local 2m Echolink repeater I had a QSO with 6K2EBB in Inchon, South Korea.

I have not been able to find a call sign lookup site on line to get his information....

Can anyone tell me where to look up calls from South Korea?

QRZ had nothing....ARRL had nothing...and most other sites are FCC - issued licenses...

Thanks In Advance

From: seattlesigs73
Topic: 135 Message: 135

Has anyone come up with something that will keep a speaker/mic plugged into this radio?

Earlier this fall I worked a 4 hour parade as part of a public service/communications team.

The speaker/mic disconnected from my HT about 6 times within the first 30 minutes..and it got so frustrating that I had to just take it out and hold the HT to my ear instead.

Has anyone out there come up with something that will keep that speaker/mic plugged in?

Yaesu FT60R Handheld 2m/70cm with Wideband Receive

Very gently used. Original box, charger, manual, etc.

Mint condition. Asking $140 + actual shipping and insurance

==========
Also for sale:
==========

ICOM R5 Handheld Communications Receiver w/extras

Mint Condition. Includes: wall charger, original box, manuals, etc.
Maldol MHA-209SMA "Stubby" antenna
Icom Leather Case
Programming Cable

All said, I spent $240 for the ICOM and extras. Asking $170 + actual shipping and insurance

---
Sony ICF-SW7600GR Shortwave Receiver w/SSB

Mint Condition. Includes original box, manual, leather carrying case and Sony AN-71 Compact SW antenna

Asking $100 + actual shipping and insurance
==========
========

All of these units were personally bought and very gently used by me. Why am I selling them? I want to get into HF, and unfortunately have to trade up to get there. Reputation is everything to me. You can check my eBay feedback to verify this. (eBay ID= vectorczar) Please contact me via email with any questions.

Thanks,

Lee

143. Yaesu Speaker Mike

Yahoo group: Yaesu_FT60R
Date: 2009-04-05 17:21:02 UTC
From: seattlesigs73
Topic: 143 Message: 143

I know I asked this a year or two ago....but the season is here for more and more public service tasks, and I still cannot keep my Yaesu hand mike plugged into the FT60R...

Has anyone come up with a fool-proof way to keep it plugged in?

I am looking at large rubberbands here as the only way to make sure that it stays in place.

Last year I worked the NFL Hall of Fame Grand Parade in Canton OH. We start before sunrise and the end of the parade is around noon. My mike came out a dozen times in the first hour, which left me holding the rig next to my ear for 6 hours!

Any suggestions/ideas will be appreciated!

I have had some luck running the mike cable under the belt clip before putting the radio on the belt. I also would like to see Yaesu come up with a better mount

From: Roger Sale
Topic: 143 Message: 145

I have the same problem but with a watson mike, I managed to keep it in place by putting the radio in an old FT case (not originally for ft60) this works but is a tight fit, and the thin leather or maybe pvc hinders operation and is likely to split. Although not pretty, the only practical alternative is using rubber bands, its a pity that yaesu let a minor issue spoil what is a good radio.

147. Odd split frequency with dcs tone

Yahoo group: Yaesu_FT60R
Date: 2009-05-28 22:43:51 UTC
From: Michael
Topic: 147 Message: 147

Hi, name is Mike KB7QDX. I'm able to program odd split frequency into radio (tx 446.65; rx 146.505) but, am unable to set DCS tone into memory. Am able to add dcs tone while in memory mode to operate but unable to save into memory. Did not see anything in manual that said this could not be done.

Any body ever do this successfully?

148. swr grease

Yahoo group: Yaesu_FT60R
Date: 2009-06-04 20:08:43 UTC
From: kc5jmu
Topic: 148 Message: 148

I read somewhere about SWR grease and am not sure what you're supposed to do with it. The Cushcraft yagi that I got from AES come with a packet of some sort of grease that is supposed to go on the PL259 fitting, but it wasn't clear if the grease is only supposed to go on the threaded ends of the fittings or if any of the grease was supposed to be placed directly on the contact inside the fittings.

Any thoughts on this?

Thanks,

Mark

Lets make one thing perfectly clear. There is NO such thing as SWR grease. What you are refering to as electrical sealant compound. Electricans use it on out door electrical connections. The automotive industry uses it on electrical connections on their cars and trucks.

I've been in radio for almost 30 years. I have never found the need for the stuff. Over the years, I've seen April Fools jokes about SWR grease. It's a con. As for the other stuff. Stay away. Use some good eletrical tape with liquid tape over it. It's last you for years!

From: Matthew Denney
Topic: 150 Message: 150

Good morning all,

I have a question. I charged my FT-60 last night, and now cannot get any or at least very little transmit power out of it. I could only get into a local repeater being about 1/4 mile away. Any suggestions would be appreciated.

I can think of a few reasons.

1. Make sure your battery really recharged. Does the power indicator tell you that it's full power?

2. Is your antenna loose or cross threaded? SMA clean?

3. Are you set at highest transmit power?

153. FT-60 Commander software issues

Yahoo group: Yaesu_FT60R
Date: 2009-08-06 16:28:14 UTC
From: abreuma677
Topic: 153 Message: 153

I just became a ham and bought a FT-60R. I decided to buy the cheap USB programming cable via ebay and thought I'd try FT-60 Commander to program my radio. I was able to get the software to read the radio settings but as I played with the software I got subscript out of range errors. I was able to repeat this behavior. I sent email to the author but didn't get a response. I'm running Windows XP Pro SP2 all patched up. Is anyone having good luck with FT-60 Commander? Can I assume the Yaesu software and serial cable works well?

As to your attempts to contact the author of the Commander series. I have tried from time to time to contact him but to NO avail. I have offered to have him call

me collect but again NO answer from him. In most respects his programs have been great but with a few snags that he will not reply to. In the past he has done a good job of allowing his programs to allow units in the different Yaesu family to be broad banded. I have seen NO action from him since the FT60 program and NO activity on the VX8.. Good luck with your contact efforts..

try turning up the squelch otherwise it won't scan.

press the up or down arrow it will start to scan, you will know it is in scan mode because the decimal point between the frequencies will be flashing, to stop scanning just press the PTT button

Have you used this before without getting the error?

Is this your first time? Have you ever gotten it to work?

I was getting the error message....until I changed cables.

(I had a hard time believing the problem was the cable, as it was brand new!)

They replaced the cable for free.

David

170. Viewing Frequencies

Yahoo group: Yaesu_FT60R
Date: 2011-05-11 18:49:09 UTC
From: shuntera
Topic: 170 Message: 170

One of things i don't like about my new FT-60r is that after labeling a Memory location it is a bit of a pain to then go and see the frequency behind the label. Would be great if you could hold down one key and it showed you the actual frequency and reverted back to the label when you let it go.

Having got JP Commander to work I can look up the memory location and frequency but I don't always have my PC available to do that.

I programmed the "P2" button for Alpha/Freq. All you have to do is hit "F", "P2" and rotate the dial to switch. You can then switch back, or hit the PTT to exit. Check the owner's manual (I know, READ THE MANUAL???) to see how to change the function. For local freqs I use all the time, I have the freq displayed. For outlying areas, I display the name.

From: strandbiker1
Topic: 174 Message: 174

I am presently using my FT 60, programming it with the 3.70.25 version of the RT systems software.I am using a stock RT systems serial cable and a USB to serial adapter. No problems with the cable or adapter. I can upload from the radio fine and then download back to it with no problem, if I make no changes. When I change some memory channels to Scan "Skip", it says the hardware configuration has been changed and to again upload from the radio. I have done that many times with the same results, even if I merely change the data received directly from the radio. Any ideas as to what I am doing wrong?

Thanks,

Skip

Topic: 170 Message: 175

When you're in Memory Mode with a channel selected and the alpha-numeric name tag (label) showing in the display, momentarily press the [BAND(BAND DN)(#)] key to display the channel frequency (Ref. page 30 of the Manual). Press it again to go back to the name tag display. It's not as elegant as a toggle button (press and release) but it's almost as good.

What I wish I could do would be to turn the DIAL knob when I'm in Memory mode to scroll through the channels and display the frequencies instead of the channels' name tags. Set Mode Item 27 just turns off the tag for one channel at a time.

I do my lookups in an Excel spreadsheet that was created from a Commander format, at home.

From: wb7osr
Topic: 176 Message: 176

I have a two-month-old FT060R that gets so hot with a charger on it (original battery pack) that you can't keep a finger on the brass screw heads on the rear of the battery pack. The entire battery pack gets so hot after about ten minutes that I worry about it. I use two chargers - a D.C. charger in the car and an AC-DC charger in the house. Both put out about 8.8 VDC to the radio. I don't notice any problem with the normal operation of the radio.

Has anyone else noticed this situation? Is it maybe a Problem indicative of a cell failure in the battery pack? Or is that kind of heat normal?

TIA,

Kenn, WB7OSR

Take it back for warranty repair/replacement. Sounds like something is defective.

Subject: [Yaesu_FT60R] Charging Heat. Normal?

I have a two-month-old FT060R that gets so hot with a charger on it (original battery pack) that you can't keep a finger on the brass screw heads on the rear of the battery pack. The entire battery pack gets so hot after about ten minutes that I worry about it. I use two chargers - a D.C. charger in the car and an AC-DC charger in the house. Both put out about 8.8 VDC to the radio. I don't notice any problem with the normal operation of the radio.

Has anyone else noticed this situation? Is it maybe a Problem indicative of a cell failure in the battery pack? Or is that kind of heat normal?

TIA,

Kenn, WB7OSR

Hi all,
The NC-88C battery charger *can't* power the FT-60R during transmit,
because output is 12V @ 200mA only.
If you do so, the rig will power off or reset.
But if this charger is used with FT-60R in receive mode or power off,
the battery doesn't heat.

When you use the cigarette lighter adapter or an external power box, you
can transmit but in this case the rig is very hot after 10 minutes,
especially with full power at 5W.

73 and merry Christmas ! :-)

Dave,

No; the hot battery pack is just a result of the charger being connected to the 60R when it is turned off. The pack remains hot for a long time after I remove the charger. I suspect a bad cell in the pack but, the battery voltage and performance of the pack don't seem to have been affected, yet.

I reviewed my Yaesu warranty and says to contact the dealer before I contact Yaesu in CA. My 60R also has an intermittant transmit issue which I need to talk to someone about - dealer or Yaesu. Sometimes it transmits with no audio, using an internal OR external mic.

I understand that....but the question remains....have you (ever) been transmitting while using the wall adapter of cigarette lighter cord? I mean previously.

I understand it gets hot during periods other than what I am describing....but wondering if you have been (in the past) transmitting with the ac wall adapter...or cigarette lighter.

Dave,

Okay, I understand.

As far as transmitting with the AC charger attached - no.

As far as transmitting with the cigarette lighter cord - maybe. Not that I recall but, it could have happened for a short QSO. Short because from the mobile, I have had poor results. The mag mounted antenna is suspect.
That said, I have heard that transmitting with a cigarette lighter cord attached to the radio is an accepted way to operate the radio. The radio indicates that the voltage with the DC cord plugged in is about 8.8 VDC. No load voltage with the engine on is 14.2 VDC. My battery eliminator for the 60R produces 7.98 VDC, engine running or not.

<<

The reason I ask, is that I was experiencing nthe same thing...where the radio would get so hot, I couldn't even hold it in my hand.

I went back to Ham Radio Outlet, siknce I had bought it there, and explained and demonstarated it to the sales dude.

He sent it back to be fixed under warrantee.....and when it came back....it had a description of a few components that were changed....and a note: "Do not transmit in high-power mode while using the cigarette lighter adapter." I know there was a few occaisions I was using it to transmit while connected to the cigarette lighter adapter.

NJot sure why thats the case...or what went wrong...but I have it now back repaired (under warrantee), and I have not been using it to transmit with the cig lighter adapter.

According to the instructions, I suppose I could use it with lower power...but while operating mobile, I need all the huice I can get...so I have to make sure it's all charged up before I expect to use it for any transmitting.

I don't believe that there is any "fool proof" way to keep that mic plug in. Mine does the same thing and the rig is only a few weeks old and so is the 2-pin-to-one-pin adapter that I use.

I use rubber bands. They work.

As for Yaesu making any changes to the FT-60R/E, like to the mic-plug-problem or lack of an Li-Ion battery, forget it! They have a "cash cow" in that radio. It's been around for, what, five years or so? And, it's still selling strong. The radio is now being made in China like the Wouxuns ("Oh-shings"). That's probably why Yaesu dropped the price recently.

When did they start making them in China? I bought mine new at HRO in July, '08 and it is made in Japan. The battery pack is Chinese though.

My FT60R has developed a problem where the the input voltage detected and displayed by the radio is very low. Occurs with the normal battery pack that is fully charged or with the alkaline battery pack or with and external +12vdc applied. The display has the low battery symbol flashing and the selection of DC Volts readout shows 4 to 6 volts.

Has anyone seen this problem??

Did you read the radio before trying to reprogram it? You might also try the FT-60 Commander software from KC8UNJ.com. I hope you do not get into trouble talking on the railroad freqs on an unauthorized radio. Good luck.

Jardy,

 Yes, I read the radio before trying to program. I won't get into trouble, as I AM authorized to transmit on those frequencies. I'll give FT-60 commander a try, however, that doesn't help with the mster reset problem. Thanks.

You may be authorized, but the FT-60 is not type accepted for that band. Whoever is in charge of your comms will probably have a problem with your using it. Maybe 'don't ask, don't tell'?

194. Something other than a speaker-mic?

Yahoo group: Yaesu_FT60R
Date: 2012-09-16 00:31:34 UTC
From: Mark Abreu
Topic: 194 Message: 194

I know this isn't an FT-60R specific question but since I've got one I thought I'd ask here. I have the speaker-mic and it's ok, but there are times when I'd like the audio via an ear-piece - especially noisy environments. I see Yaesu has an iPod-like ear speaker accessory but my ears don't hold those too well. I'd consider any option where I'm not going to have to worry about the ear piece falling out, but I don't want headphones. Over the ear, accoustic tube, something like that. Can someone make a recommendation or warn me off certain options?

I bought one of the accoustic tube/ mike combos from www.radio888.com, used it all day at Field day and forgot it was in my ear.

They make it for the FT-60r, as well as other rigs. I tried al lthe other headsets B4 that, this is the best sol'n for me.

Hi, a cheap option is a D shaped earphone which fits around the ear with a small speaker in the middle. It is comfortable to wear and depending on the type of speaker mike can fit in a jack on that or the speaker socket of the rig. In the UK they cost 3 or 4 quid.

I use the same thing for all day events, and those are more
comfortable than other choices.

The one I have has a 2.5 mm mono connector that plugs into the bottom
of the standard Yaesu speaker-mike MH-34.

The speaker mike I keep clipped on my shoulder or neck area, so I can
easily speak without moving anything.

I can't remember the exchange rate, but I have gotten them for $6-7 USD.

I appreciate all the advice on the ear mic choices. I'll give one a shot and let you know how it goes.

Actually I think the website is http://www.radioshop888.com/ .

Reminds me of a former network team leader at work who sent out instructions to the entire plant about new cell phones. He hand-typed the URL and of course made a small error. A porno site was camped on the mispelled URL and boy did the phones start ringing after that email.

200. NC-88B Charger and FT=60R

Yahoo group: Yaesu_FT60R
Date: 2012-10-08 02:54:05 UTC
From: wb7osr
Topic: 200 Message: 200

I have some issues with my FT-60R and I'm sending it to Yaesu on Tuesday.

One issue is with the charger. It has a no-load voltage of 17 VDC. That seems way too high to me. It charges the FT-60R battery from 6.0 volts to over 8 volts in about 3 hours. Meanwhile, the charger gets HOT; about 110 degrees F. That doesn't seem right.

Anyone else have such results?

TIA,

WB7OSR, Kenn

204. new batteries for my FT 60 or other options?

Yahoo group: Yaesu_FT60R

From: strandbiker1@...
Topic: 204 Message: 204

The batteries for my FT 60 and VX 177 are in need of replacement. Is it worth buying the batteries at 20-3o dollars each or by a new radio like the Baofeng UV 82C?

Input??

Thanks in advance

Skip, KD6JA

There are advantages both ways. You cannot get an easier radio to manually program than the FT-60.

I like my FT60 very much and I would get new batteries for it for sure.
This radio is still a good VFO without
having to program via computer.
